

**STONEWALL PLATINUM®**

NON-COMBUSTIBLE ACOUSTIC INSULATION PANEL SYSTEMS

Stonewall Platinum is a main supplier of non-combustible acoustic insulation made from volcanic stone and supplies the industrial, commercial and residential market.

As a family owned and independent supplier to the Australian building industry, Stonewall Platinum recognises that it has various responsibilities to the environment, society, across the building industry and supply chain.

Our goal is to be the most environmental providers of non-combustible acoustic insulation in the world.

How does Stonewall Platinum bring this environmental attitude to the building industry?

Below are the guidelines we bring to market, which ensures Stonewall Platinum practices what we preach.

- Products received are to specification, in doing so, minimal waste is created.
- Waste which is created during production or onsite is recycled into bricks.
- These bricks will be reused in all manner of future infrastructure projects.
- Where waste is generated on a project, it is collected and repurposed as sampling.
- Working with an independent supply chain consultants in minimizing and reducing packaging waste and reducing a carbon footprint.
- Stonewall Platinum engages in attending Global Green Tag seminars to remain up to date with environmental accreditation.
- Lead by example in sustainability and care for the environment as certified by Global Greentag International.
- Actively look for alternatives and limit the use of any ingredients where the final product will release harmful or toxic emissions at levels to cause harm into the earth's atmosphere.
- Develop internal strategies, where our strengths will be shared amongst the industry for a broader positive influence.
- Develop internal initiatives where energy used is minimised as standard, thereby less impact on the environment.
- Inhouse research and development of existing products, where efficiencies may be found to further assist environmental impact.
- The engagement of local suppliers where possible to minimise carbon footprint.

Stonewall Platinum will in the future intend on becoming waste neutral and 100% carbon offset.

Product compliance is a given in the industry but we strive to do and be better than what the standard is.

Stonewall Platinum aims to be the class leader in our field when talked about by our competitors and distributors.
